

Selerix + Trustmark

A comprehensive benefits enrollment solution including software, maintenance and data integration

Selerix offers Benefits-Selection, a secure, Internet-based platform that enables Web- or laptop-based benefit communications, self-service or agent-assisted enrollment, comprehensive reporting and simplified benefits administration.

Integration

Selerix offers connectivity to other Web-based enrollment platforms. This enables Trustmark products, tools and content to be integrated easily into other systems

Flexible business rules

The system can be configured to support any combination of open enrollment, new hire enrollment and year-round qualified status changes.

Customizable user interface

From logos and color schemes to complete employer branding, the Benefits-Selection user interface provides the flexibility to meet the demands of the most discerning employer groups. Plus, Trustmark product videos are available on the system.

Enrollment setup and administrator tools

The system can be configured to support any combination of open enrollment, new hire enrollment and year-round qualified status changes.

Free enrollment of Trustmark products

Enroll Trustmark products with no technology cost via laptop, call center or online with employee self-service.

Administrator tools

Administrator functionality enables the HR staff and/or enrollment case managers to monitor enrollment activity and process enrollments on behalf of employees requiring assistance, as well as view enrollment history for employees.

Voluntary Benefits

Online or offline deployment

The system is currently available for Web-based enrollments via the Internet for employee self-service or agent-assisted co-browse sessions. The system can also be used offline on disconnected laptops if a worksite enrollment process is desired.

Post-Enrollment Data Integration

The data integration capabilities enable updates of employee and enrollment data to most back-office HRIS/payroll systems and carrier eligibility systems. After electronic interfaces are established, the system automatically manages all data transmissions, schedules, and data formats, ensuring each recipient receives the right data in the right format at the right time.

Case Building with BenefitAgent

By simply answering questions in the online BenefitAgent interview guide and importing key information, producers can publish their groups to enable customized electronic enrollment, produce custom benefit statements and create a variety of reports - all at the push of a button. And best of all, it is free!

Step-by-Step Case Building Guide

A case-building wizard walks the producer through a wide range of information such as enrollment dates, benefit plans, rates, eligibility rules and payroll details. You can even import census information.

Client customization

Meet the needs of employer groups by using their logos, color schemes, communications and presentations to brand the enrollment websites.

Single or Multiple Sessions

Producers have the flexibility of completing the guided interview in one session, or logging out of the website and finishing it later. A checkmark identifies the next step to complete on the outline.

One-Click Development

When all steps are completed and automatically reviewed for errors, producers simply publish the case directly to Benefits-Selection with the press of a button.

**You care.
We listen.**
